# Why Choose Us for Your Emergency Lighting Inspection?

Knowledgeable. Reliable. Safety-focused. Inspection-ready.

## Specialist Emergency Lighting Knowledge

Emergency lighting is not just a box-ticking exercise. It is a life-safety system designed to help people safely evacuate a building when normal lighting fails. Our inspections focus on system operation, escape route visibility, exit signage, battery condition, test records, and practical safety concerns.

## Irish Standards & Fire Safety Awareness

Inspections are carried out with reference to I.S. 3217:2023 Emergency Lighting and relevant Irish fire safety guidance. We help businesses, landlords, property managers, schools, offices, shops, and industrial premises understand their emergency lighting responsibilities.

## Clear Testing & Detailed Reporting

We provide clear inspection findings, practical recommendations, and professional reports to support maintenance planning, safety management, and compliance records.

## Built Around Safety, Not Guesswork

Our approach is professional, structured, and safety-focused. We help identify issues early, support safer premises, and provide documentation that can assist with fire safety management.

## What We Look For

Failed or weak emergency lighting batteries

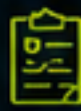

Non-operational emergency fittings

Damaged or missing exit signs

Poor escape route illumination

Incorrect or incomplete test records

Obstructed escape routes or visibility issues

Maintenance issues requiring attention

## Why Regular Inspection Matters

Emergency lighting may only be needed during a power failure, fire, or evacuation. Regular inspection helps reduce the risk of discovering faults when it is already too late.

## What Is Emergency Lighting? Why Inspections Matter

Emergency lighting is a backup lighting system that automatically operates when normal power fails. It helps people safely find escape routes, exits, corridors, stairways, and other critical areas during an emergency.

### Why is inspection needed?

Confirms the system operates correctly during a power failure

Helps identify failed batteries, lamps, fittings, or damaged exit signs

Supports safe evacuation of staff, residents, customers, and visitors

Helps maintain proper records for safety management

Reduces the risk of non-functioning emergency lighting when it is needed most

Inspections carried out with reference to **I.S. 3217:2023** Emergency Lighting and relevant Irish fire safety guidance.
